

## Connect to the Internet using your iPhone personal hotspot.

When Wi-Fi is unavailable, you can use your cell phone to generate a mobile hotspot for your computer

Step 1: **Enable** your iPhone's personal hotspot

1. Open your iPhone's settings 
2. Tap **Personal Hotspot** near the top of the settings page, just below Cellular (or Mobile Data) option

3. Slide Personal Hotspot right to the **ON** position. The switch will change from Off  to On 

**Note:** You can change the password for your iPhone's hotspot by tapping Wi-Fi password

Step 2: **Connect** to your personal hotspot on your laptop

1. Select the Wi-Fi icon on your computer desktop 
2. Click your iPhone's name → Select the box that says **connect automatically** → Click Connect

Enter your phone's hotspot password → Select Next

Note: When you are finished using your phone as a hotspot, turn off your hotspot.

Step 3: **Manage** your Wi-Fi hotspot connection from your phone.

In the future, when you need to connect to your personal hotspot simply toggle the personal hotspot button to the ON position and your laptop will automatically connect

**Note: Always turn off your hotspot when you are doing using it.**

*\*\*Reimbursement for usage of mobile hotspot is subject to approval by Procurement.\*\**
